

Corporate Fact Sheet

Intro to RARIS

Founded in 2004, we are agnostic System and Network Integrators. We deploy IT/Telecom systems and networks for SMBs and Municipalities. Our clients appreciate our nimble, professional and responsive approach.

Clients Benefits

We approach our clients' communication requirements from a broad and holistic perspective to provide optimal IP-based solutions for wireline and wireless networks with an innovative, bias-free approach. This involves integrating networks and services using our broad knowledge of technologies and leveraging our certifications and accreditations.

You Are in Need When ...

- Moving offices and see the opportunity to upgrade your network and systems
- Need a subcontractor to implement work that you are too busy to complete
- Add to or build a LAN/Data centre
- Your company's VoIP phone system doesn't work properly, because of issues with: network QoS, TDM to SIP, configuration, or features not working properly
- You operate in multi and/or remote locations and want simple and secure access to company resources agnostic of the variety of client devices
- Want to implement/integrate remote workers into your communications system
- Your company wants to enhance the level of security for your LAN/WAN
- Access to video, internet and phone from remote locations
- Need high availability or disaster recovery
- Pre-emptive monitoring and sending of alerts and notifications prior to experiencing issues with: systems, networks, legacy equipment, or utilities e.g. pumps and reservoirs

Communicating Smarter

Leveraging our experience and expertise to help our clients achieve integrated IP-Based solutions that provide productivity improvements and lower costs for their organization.

'DIS' is what we do ...

We Design, Install and Service IP-based solutions for wireline and wireless networks.

Design

- Wireless propagation models (4G, WiFi, WiMAX, etc...)
- Link Budget calculations and Path Analyses
- Network design (LAN/WAN/MAN)
- Network/System monitoring and notifications
- 4G/GSM data solutions
- Cabling (In/Outside plant, fibre/copper) and data centre

Install

- Network/System monitoring and notifications
- Structured cabling deployments
- VoIP Phone systems integration (Asterisk to CISCO)
- Bandwidth management (QoS)
- Network configuration
- Municipal and industrial networks
- Wireless Installations (Radio, antennae, tower, coax)

Service

- System/Network: maintenance, monitoring, troubleshooting and configuration
- Wireless Site Surveys (3G, 4G, WiFi, WiMAX, etc.)
- Firewall policy maintenance
- Wireless frequency optimization
- Moves, Adds and Changes (MACs)
